13 October 1959

MEMORANDUM FOR THE RECORD

SUBJECT: Discussion of Destructor System with DPD

1. On 12 October 1959, [] DPD, extension [] contacted this division about the [] Destructor System. He wants to be able to destroy the newest equipment which will be installed in the [] aircraft in November 1959.

2. I explained our system to [] and left sample plastic primacord connectors and the Equipment Safeguard Unit instruction manual with him. Our destructor system will meet his requirements and would probably be installed in the aft section of the plane. He is concerned about weight (the plane is already 2000 pounds overweight), however, what we would install would only weigh 6 to 10 pounds depending on the amount of explosive needed.

3. If DPD decides to use our system, this division will probably work with the equipment manufacturer to get mock-ups for tests and study the explosive location. No action is required until we hear from []
